

FLUORIDE

Quarterly Journal of
The International
Society for Fluoride
Research Inc.

SUBMITTING MANUSCRIPTS TO *FLUORIDE*: GUIDELINES FOR AUTHORS—REVISED APRIL 2025

To preserve and maintain *Fluoride* as a credible scientific journal with high-level standards for quality and content, manuscripts of research reports and reviews submitted for publication in *Fluoride* must conform to the following guidelines before they can be processed for external peer review and possible publication. Action will not be taken on submissions that fail to do this, and authors will be so notified.

1. Manuscripts should be submitted using the template in Word available at <https://www.fluorideresearch.online> and <https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fwww.fluorideresearch.online%2Ftemplate%2Ffiles%2Ftemplate.docx&wdOrigin=BROWSELINK>

Word files may occasionally open differently on different computers upsetting the placement of figures and you are welcome to send both a Word file and a pdf file of a paper. The pdf files open consistently.

2. It is the responsibility of authors to MAKE SURE that the following guidelines for submitting manuscripts, including spelling, punctuation, manner of citing references, and formatting tables and figures are followed precisely as written. Formatting the title page, abstract, key words, text, reference lists, tables, and figures must be done according to these guidelines. All details of the data and accuracy of references SHOULD BE CAREFULLY CHECKED BEFORE manuscripts are submitted. Authors may consider using Chatgpt Checker, available with the app ChatGTP, to check the grammar of their papers.

3. If a figure has been published previously, acknowledge the original source and submit written permission from the copyright holder to reproduce the material.

Permission is required irrespective of authorship or publisher except for documents in the public domain.

4. Manuscripts should be submitted to the nearest Regional Editor of *Fluoride* for the country in which the corresponding author resides.

5. For uniformity, manuscripts should be prepared according to Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly Work in Medical Journals, updated January 2025, of the International Committee of Medical Journal Editors (ICMJE) and available at <https://www.icmje.org/> However for *Fluoride* no periods should be added after journal titles or journal title abbreviations. The numbers of the references in the reference section should be enclosed in square brackets. e.g., [1]

6. All research reports and reviews, including papers presented at ISFR conferences, are evaluated by qualified reviewers and/or members of the *Fluoride* Editorial Board before acceptance for publication. When submissions are judged acceptable, authors are asked to incorporate into their paper the suggestions and recommendations of the reviewers and the editorial changes proposed by the regional editor.

7. The following guidelines should be followed closely to facilitate and expedite publication. They refer primarily to research reports and research notes and apply only in part to research reviews and other types of contributions. Manuscripts that do not adhere to these guidelines will be returned for further revision. In particular, authors should make sure that references are complete and accurate. If significant errors are found in the references, the manuscript will not be processed until all errors are corrected. The

responsibility for references being correct lies with authors. Our editors are unable to check and verify each reference.

8. Title: Care should be taken to make the full or main title as clear and informative as possible.

9. Authors' names and addresses: List the author(s) by the full first name or initials, with the family or surname last. Use a comma between names and a lowercase letter superscript following each comma to refer to the address in the left sidebar on the first page. For the address, give the employment address of each author and the complete postal and E-mail address of the author for correspondence. Identify the corresponding author with an asterisk.

10. Abstract: Provide a concise, factual abstract of the main results and conclusions of the research.

11. Keywords: Immediately following the Abstract, provide, for indexing purposes, a list in alphabetical order (first letter capitalized) of three to ten important Keywords separated by semicolons. Do not use general words like Animals, Fluoride, Plants. Instead, use specific words or short phrases.

12. Introduction: The Introduction should begin with a brief statement about the background (not a mini-review) and nature of the research. Pertinent previous work by the author(s) or by others, especially if published in *Fluoride*, should always be cited in the Introduction and later in the paper as appropriate.

13. Comma use: A comma should be used after the penultimate entry of a series before the word "and" or "or," e.g., The animals were a goat, a horse, and a rabbit. The color was red, white, or blue.

14. Materials and methods: This section should be written in the past tense as concisely as possible, but all essential details of how the investigation was conducted should be included, especially if new or unusual methodology was involved. When standard or published procedures were used, they should only be referenced unless substantial changes were made in them, in

which case appropriate details should be added.

15. Use of laboratory animals: 3. The Editorial Officers of *Fluoride* strongly support the maintenance of the highest standards of animal care and the control of discomforts to animals in research. Authors must indicate whether their institutional and national guidelines for the care and use of laboratory animals were followed. When reporting experiments on human subjects, authors should indicate whether the procedures followed were in accordance with the ethical standards of the responsible committee on human experimentation (institutional and national) and with the Helsinki Declaration of 1975, as revised in 2000 (World Medical Association Declaration of Helsinki: ethical principles for medical research involving human subjects. JAMA 2000 Dec 20;284(23):3043-5).

16. Results: Give a brief presentation of the principal findings of the research, drawing attention to key trends and patterns. Numerical data in tables, charts, and figures should only be summarized and should not be repeated in the text.

17. Discussion: Concentrate on the broad conclusions, interpretation, and implications of the investigation, especially as they relate to other previously-published work. In short papers and research notes, the Results and Discussion sections may be combined. In longer papers and reviews a concluding summary may be added. Mention may also be made of presentation of the research at an ISFR conference or other meeting.

18. Acknowledgments: Acknowledgments should be brief and included according to circumstances, but sources of funding should always be stated.

19. References: List and number the references in the order they are cited in the text. Please add square brackets to the reference numbers in the reference section e.g. [1] rather than 1, to meet the requirements of CNKI, a Chinese abstracting service which now covers *Fluoride*. Papers that do not comply with the use of square brackets in the reference section will be returned to the authors for correction before receiving final acceptance for publication.

All references must be cited accurately and completely according to the International Biomedical Journals style described below, which follows that of Medline and PubMed.

Titles of journals should be abbreviated according to the style used in Medline or Chemical Abstracts. The names of books and journals should be submitted in regular type, not in italics.

For books, the place of publication is given before the name of the publisher and the year of publication.

In the text of the paper, use superscripted numbers placed immediately after commas or periods.

When more than one reference is cited at a time, use commas without spaces between numbers e.g., 1,4,5,15 or, when in sequence, by a hyphen e.g., 1-3,5.

Authors should take careful note of the following modified examples of Medline/PubMed punctuation and spacing for references, including elimination of italics and periods in name abbreviations; no spaces between year, Volume and issue number, and page numbers for journal articles, etc. Like many other journals, *Fluoride* does not use periods after journal titles or journal title abbreviations. If an article is not in English the original language should be placed at the end of the reference in square brackets, e.g., [in Russian].

The Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly Work in Medical Journals, updated January 2025, of the International Committee of Medical Journal Editors (ICMJE) and available at <https://www.icmje.org/> should be followed except that in *Fluoride* periods are omitted after journal titles or journal title abbreviations, e.g.:

(i). Journal articles:

List the first six authors followed by et al.

Rose ME, Huerbin MB, Melick J, Marion DW, Palmer AM, Schiding JK, et al. Regulation of interstitial excitatory amino acid concentrations after cortical contusion injury. *Brain Res* 2002;935:40-6.

Lofwall MR, Strain EC, Brooner RK, Kindbom KA, Bigelow GE. Characteristics of older methadone maintenance (MM) patients [abstract]. *Drug Alcohol Depend* 2002;66 Suppl 1:S105.

Yu WM, Hawley TS, Hawley RG, Qu CK. Immortalization of yolk sac-derived precursor cells. *Blood* 2002 Nov 15;100(10):3828-31. Epub 2002 Jul 5.

(ii). Books:

Murray PR, Rosenthal KS, Kobayashi GS, Pfaffler MA. *Medical microbiology*. 4th ed. St. Louis: Mosby; 2002.

Gilstrap LC 3rd, Cunningham FG, and Dorsten JP, editors. *Operative obstetrics*. 2nd ed. New York: McGraw-Hill; 2002.

(iii). Conference papers:

Christensen S, Oppacher F. An analysis of Koza's computational effort statistic for genetic programming. In: Foster JA, Lutton E, Miller J, Ryan C, Tettamanzi AG, editors. *Genetic programming. EuroGP 2002: Proceedings of the 5th European Conference on Genetic Programming*; 2002 Apr 3-5; Kinsdale, Ireland. Berlin: Springer; 2002. p. 182-91.

(iv). Dissertations and theses:

Borkowski MM. *Infant sleep and feeding: a telephone survey of Hispanic Americans [doctoral dissertation]*. Mount Pleasant (MI): Central Michigan University; 2002. (Describe the nature of the dissertation or thesis in the brackets, e.g., B.S. thesis, M.S. thesis).

(v). Journal articles on the Internet:

Aboud S. Quality improvement initiative in nursing homes: the ANA acts in an advisory role. *Am J Nurs* [serial on the Internet]. 2002 Jun [cited 2002 Aug 12];102(6):[about 3 p.]. Available from: <http://www.nursingworld.org/AJN/2002/june/Wawatch.htm>

Further examples are given in *Fluoride* 2007;40(1)77-88.

20. Abbreviations and acronyms: Except for standard international system (SI) units of

measurement, all abbreviations and acronyms should be defined, preferably in parentheses, where they first occur, in both the abstract and the text. For unit-per-unit expressions, use a slash as in mg/L, µg/mL, mg/kg bw/day, mg/m³, L/hr, etc. Unit abbreviations when numbers are involved include sec for second or seconds, min for minute or minutes, hr for hour or hours, mo for month or months, yr for year or years, L for liter or liters, mL of milliliter or milliliters, µL for microliter or microliters. Day or days and week or weeks should be spelled in full, although wk is acceptable for week or weeks. Common abbreviations of Latin words should be in the regular font rather than in italics: e.g., i.e., cf., et al., etc. Fluoride when first mentioned in the abstract and introduction should be written as fluoride (F) and then as shown as F.

21. Figures: Lettering and numbering in figures (or charts) should be entirely in regular Arial font. Figures should be numbered consecutively except that numbering is omitted when there is only one figure. Captions are placed beneath figures and should NOT be part of the figures. They should be separate from the figures in an editable Word text. Figures and charts should be designed or drawn with a computer program such as Microsoft Excel, PowerPoint, Corel Draw, etc. It is critical that figures with their lettering and numbers be appropriately sized, e.g., in Arial 10-point or even 11-point font, so that, if they are reduced for printing, they, together with their lettering and numbers, remain large enough to be clearly legible.

22. Page orientation: Only the portrait page orientation should be used. The landscape orientation should not be used because of the difficulties this creates in printing *Fluoride* which has a portrait orientation...

23. Use of one or two columns: Generally the template uses two columns. However some figures and tables are better displayed if they are in one column which is wider than each of two columns. To change from one column to two columns in Word (i) left click on the part of the text where want to change to one column, (ii) left click on Page Layout in the too bar, (iii) left click on breaks, (iv) left click on section breaks continuous, (v) press

enter several times to create some space for the table or figure, (vi) left click at the end of the required space, (vii) left click on breaks (viii) left click on section breaks continuous, (ix) left click and hold down the mouse and scroll down to highlight in blue the area for the table or figure, (x) left click on columns in the tool bar, (xi) left click on one. Papers that do not use one column when required for the clarity of figures or tables will be returned to the authors for correction before receiving final. As noted in section 4, permission required for republishing figures: If a figure has been published previously, acknowledge the original source and submit written permission from the copyright holder to reproduce the material. Permission is required irrespective of authorship or publisher except for documents in the public domain.

24. Tables: Examples of Tables are given in the issues of *Fluoride*. Tables should be numbered consecutively Table 1., Table 2., etc., (except that the numbering is omitted when there is only one table), followed by a brief but informative main header title. Tables should be in the portrait orientation rather than in landscape mode to make the printing of *Fluoride* in hardcopy easier. A large landscape mode table may be able to be split into two portrait mode. Explanatory footnotes, such as information about p and other statistical values and other material related to the table should be placed under this last line. Brief clarifications and units, usually in parenthesis, are best placed in the table heading or subheadings. Decimals should be expressed with decimal points (periods), not commas.

Explanatory footnotes placed at the bottom of the table are identified by superscripted lowercase letters. For footnotes to numerical data in the table, the following superscripted symbols are used in the order: *, †, ‡, §, ||, **, ††, ‡‡, §§, |||. Abbreviations and acronyms not already defined in the text should be defined in the headings or in lettered footnotes. Data presented with standard deviation (±SD) or standard error of the mean (±SEM) should be so labeled. For designating statistical probability, use a lower case p without spacing, e.g., p<0.01.
